

## GOLDY™ - FOR GOLDFISH AND AQUATIC TURTLES

A SPECIAL FORMULATION FOR GOLDFISH AND WATER TURTLES KEPT IN BOWLS OR SMALL TANKS.

### What is GOLDY?

GOLDY is a unique formulation especially developed for cold water fish, goldfish and water turtles kept in bowls or small tanks without filters or pumps.

Your fish will be happier and live a healthier life in a bowl or small tank treated with GOLDY.

### What does GOLDY do?

GOLDY cleans and freshens your fishes' water. It clears up waste and helps your fish breath easier by increasing the amount of oxygen. The water will stay healthier and cleaner for longer.

GOLDY also works as a water disinfectant and prevents fungal infections and so called 'pop-eye' with turtles.

GOLDY protects the fishes' skinlayer and gills and activates the resistance of affected skinlayer. GOLDY prevents the origin of fungus and other, for fish and turtles, dangerous pathogens.

### GOLDY:

- Protects your fishes skinlayer and gills.
- Cleans and freshens the water, this will:
  - Help heal wounds.
  - Help prevent disease in Goldfish bowls.
- Prevents so called 'Popeye' with turtles.

### Dosage

**1** Measure the amount of litres in your bowl or tank. Calculate only the area occupied by water (your bowl or tank will not be rim full).

**2** Add drops of GOLDY to your aquarium by holding the bottle upside down and squeezing

the pipette. (20 drops = 1ml).

**Standard dosage** (per Litre/ 0.22 Gallon)  
Weekly (or after every water change):  
5 drops per Litre / 23 drops per gallon.

### What precautions must I take when using GOLDY? Water Changes?

It is generally not necessary to do a water change before or after using GOLDY. However, there are a few exceptions:

- 1** In the case of poor water quality.
- 2** If you are close to your weekly water change.

### Filtering?

Generally there will be no filter, in case there is a filter do not use active carbon and keep the filter running day and night.

### Interactions with other Treatments?

Do not combine with other treatments. This product breaks down gradually, but if you wish to use another treatment straight after using this one, you can remove all components by filtering over fresh active carbon or carry out a water change.

### Sediment?

You may notice flake-like sediment forming in your bottle of GOLDY. In this case shake and if necessary heat until lukewarm (40-60° C) the bottle before use. Fluctuations in temperature can cause a light turbidity or some sediment, which in spite of heating can persist for a day. The sediment is a natural

compound and is totally harmless and will not affect the performance of GOLDY. The sediment dissolves when entering your bowl or aquarium.

### Hints for keeping happy goldfish:

- There are many different types of goldfish. Ask your expert shopkeeper for advice on what to keep.
- A larger goldfish bowl is better for your fish as they have more room to move and breath.
- Only fill your goldfish bowl two-thirds full. This lets more air into to the water.
- Do not put too many fish in the bowl. Give them some room to swim and live freely.
- Avoid placing your bowl in direct sunlight or near a radiator or heater.
- Feed your fish once per day but do not overfeed (food should be eaten in 5 minutes).
- Be careful with detergents, wash them out thoroughly, for they are dangerous to fish.
- Change your water once a week (Bowls 100 % water change) (small filtered tanks, less than 25 litres, 50-30% water change).
- Ideally, let the new water stand for 12-24 hours before replacing the water in your bowl.
- Add GOLDY after the water is changed. When kept properly, your Goldfish can live happily for many years.

## **GOLDY™ - FOR GOLDFISH AND AQUATIC TURTLES**

---

### **Hints for keeping happy turtles:**

- Feed your Turtles small pieces of meat, fish or tubifex worms, which are both healthy and enjoyable.
- Turtles benefit from and enjoy sunlight. Place them in sunlight (outside of the tank) for several hours per week.
- Do not place the tank in sunlight as you may get algae growth.
- Keep your turtles warm in winter.
- Strengthen turtle health by adding vitamin AD3 on their food.

### **Warnings:**

- Always read the leaflet before use.
- This product may stain if spilt.
- Keep out of reach of children.
- Store bottle and leaflet in original packaging.
- For ornamental fish only.
- Keep away from cuts, eyes and other sensitive areas.
- This information is subject to change. Please check if you have the latest version.
- This information is general product information not to be mistaken for the instruction leaflet. No rights can be derived from this document.
